

STERILE NEEDLES FOR SURGERY APPLICATIONS

Packing of needle-thread combinations.

1

Deliver

Needle and thread are delivered. For the needle-thread combinations, various small and large formats are provided.

2

Removal | Packing

TRAPO AG feeds the needle-thread combination of the endless aluminium foil which is furnished with a trough. A second aluminium foil is placed over it, then sealed and perforated.

3

Fit wire-mesh crates

The packed needle-thread combinations are placed in stackable wire mesh boxes.

4

Sterilizing

The stacked boxes with the needle-thread combinations are sterilized.

5

Removal | Onward transport

After the sterilization process the trays (needle-thread combinations packed in aluminium foil) are removed from the wire mesh boxes and fed to the on-site packing section.

6

Packing

After onward transport, the provision of the sealed, sterile needle-thread combinations joins for packaging and fully-automatic dispatch.
